SUMMARY

New Grad Software Engineering student specializing in Distributed Systems and Web development with **2+** years of project experience in developing, maintaining, and testing large-scale applications.

EDUCATION

San Jose State University, San Jose, CA Jan 2022 – Dec 2023(Expected)
Master of Science in Software Engineering **3.78 GPA**
Relevant coursework: Software Systems Engineering, Machine Learning, Business Intelligence
Vardhaman College of Engineering, Hyderabad, India Aug 2015 – May 2019
Bachelor of Technology in Computer Science and Engineering **3.72 GPA**
Relevant coursework: Data Structures, Operating Systems, Design Patterns, Probability & Statistics

SKILLS

Languages: Python, Java, C++, JavaScript, HTML/CSS, Go, SQL, GraphQL, Bash
Frameworks: Flask, Django, Node.js, React.js, Next.js, Spring Boot, FastAPI, REST API, gRPC
Cloud Infrastructure: AWS, Heroku, Docker, Kubernetes, Terraform, Elasticsearch, Git CI/CD
Data and Machine Learning: Pandas, Langchain, Huggingface, Tensorflow, Pytorch, Tableau, PostgreSQL

EXPERIENCE

Accrescent Group, Remote: Software Engineer Intern Jun 2023 – Aug 2023

- Developed a modern dashboard with **Python, Flask** and **D3.js** to visualize real-time process data from **Postgres**, resulting in a **25%** improvement in system efficiency and a **15%** reduction in maintenance costs
- Implemented high-priority features and ensured the performance of the web stack by achieving **99.9%** uptime

Wipro Limited, Bengaluru, India: Software Engineer Jun 2019 – Dec 2021

- Revamped the UI of customer's website using **React.js** which had over a **million** monthly visitors leading to a **15%** increase in user engagement
- Collaborated with cross-functional teams to integrate and test third-party **APIs** into existing systems using **Python**, resulting in a **50%** reduction in manual data entry errors
- Migrated **200+** contracts from Oracle to Salesforce by implementing a hybrid framework in **Java** and saved **40+** regression hours every month in the contract management process

PROJECTS

Stack Overflow clone | *React.js, Node.js, Express, SQL, MongoDB, Kafka, AWS* [GitHub]

- Developed a modern web application to emulate features of Stack Overflow, achieving lower response time and successfully handled **10,000** concurrent users using MERN stack and RESTful APIs
- Implemented multiple **Kafka** topics ensuring asynchronous processing and partitioned database schema among **MySQL, MongoDB** for scalability and performance

Cloud-Based Virtualization In Distributed Machine Learning Platforms [GitHub]

- Collaborated with multiple teams to develop a cloud platform for Sphero robots using **gRPC** and **Go** for bi-directional communication with **microservices**, reducing the latency to **0.5** seconds
- Refactored control functions to simulate the bots with high accuracy by using **Mujoco** physics engine

Flight Delay Predictor | *Python, Flask, React.js, AWS S3, Tableau* [GitHub]

- Utilized **machine learning** models to analyze **30 years** of historical data and identified cities with the highest delays and determined the best/worst airports for on-time departures
- Built a **Single-Page Application** using Flask to provide users with historical data-based travel planning tool

Travel Planner | *Javascript, Node.js, Express, Passport, MongoDB, GPT4* [GitHub]

- Deployed a centralized Web platform for **trip planning**, with trip creation, management for newbie travelers
- Integrated **OpenAI API** for trip planning details and created a dashboard to view and modify trip information
